

# Sanford Health Selects NantHealth's eviti Platform to Deliver Efficient, Evidence-Based Oncology Decision Support for Treatment of Cancer Patients

August 3, 2016

Major U.S. health system brings award-winning comprehensive clinical decision support to the upper Midwest

CULVER CITY, Calif.--(BUSINESS WIRE)-- [NantHealth](#), Inc. (Nasdaq: NH), a leading next-generation, evidence-based, personalized healthcare company, today announced that Sanford Health, one of the largest health systems in the nation, has entered into a commercial license agreement for the use of its [eviti®](#), the evidence-based treatment intelligence and web-based oncology decision support platform, which was recently named [#1 Clinical Decision Support](#) solution for 2016 by Black Book Market Research.

Under terms of the agreement, Sanford Health's network of oncologists will have access to NantHealth's eviti Connect decision support solution, providing them with evidence-based regimens, condition-specific clinical trial options and the potential for more efficient preauthorization and expedited reimbursement. Further, the eviti service holds the promise of delivering OMICS data for bio-specific therapy. Sanford Health, based in the Dakotas, joins over 75 percent of U.S. oncology practices who have used the eviti platform to make better clinical decisions earlier in the treatment process.

eviti Connect will be deployed to streamline system-wide processes for the prescribing of high-quality, cost-effective treatments while improving the flow of information between Sanford Health and its providers. All of the participants in the cancer care process benefit from eviti's collaborative, real-time approach to improving care and lowering risks and costs.

In order for oncologists to serve as many cancer patients as possible, select treatment plans with the best possible outcome, and with the most responsible economic profile, the technology solution must have the rapid-learning and data compilation capabilities of true super-computing. eviti's clinical decision support is easy to use while computing massive amounts of complex data to quickly present appropriate treatment options, including the latest peer-reviewed and proprietary immunotherapy clinical trials. eviti applications go beyond the capabilities of most traditional electronic medical records systems to present treatment options personalized for each patient's need.

"Sanford Health Plan is committed to offering oncologists in our networks the support they need to provide the best, most advanced patient care possible," said Kirk Zimmer, Executive Vice President, Sanford Health Plan. "eviti gives physicians real-time access to the widest range of evidenced-based treatment options available, and further, to ensure that the care they provide meets the clinical requirements for reimbursement. This comprehensive approach stands to improve clinical outcomes, while reducing claims denials and potentially costs."

The eviti platform provides physicians real-time access to its comprehensive, unbiased Evidence-Based Medical Library, which encompasses over 2,700 of the most appropriate, evidence-based treatment regimens covering all cancers and cancer subtypes and all modalities. Each regimen

incorporates level of evidence, expected clinical outcomes, treatment costs, toxicities and any supporting literature. This evidence-based medical library is meticulously compiled from peer-reviewed literature, oncology associations, and government agencies. The library is maintained by a full-time team of oncologists and oncology nurses, clinical informatics professionals, and an advisory board of nationally recognized oncology experts.

"We are pleased to enter into this partnership with Sanford Health and look forward to working with the organization to enable their oncologists to more quickly see and evaluate the spectrum of appropriate treatment options in order to make even better, and more informed treatment decisions," said Patrick Soon-Shiong, M.D., CEO of NantHealth. "Today, independent studies show that nearly 32 percent of oncology treatment plans deviate from evidence-based standards without medical justification. While this is understandable given the rapidly growing number of treatment options available to patients and their caregivers, we must do better. Our goal is to provide a single, reliable source of the most current information available to physicians, enabling them to provide the right care at the right time—and to immediately know whether that care will be covered."

### **Cautionary Note Concerning Forward-Looking Statements**

This press release contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995, including, among others, statements regarding the capabilities and anticipated utility of our GPS Cancer, including predicting patient response and resistance to therapeutics, enabling diagnoses by physicians and accelerating efforts to bring novel combinations of therapeutic agents to cancer patients, as well as our contribution to the Cancer 2020 initiative. Forward-looking statements are subject to numerous risks and uncertainties that could cause actual results to differ materially from currently anticipated results. Factors that may cause future results to differ materially from management's current expectations include, among other things, that GPS Cancer may not perform as anticipated, that sufficient physicians may not adopt GPS Cancer to assist their diagnoses or that healthcare payers may not provide reimbursement for GPS Cancer as expected. Our business is subject to numerous additional risks and uncertainties, including, among others, risks relating to market acceptance of our products; our ability to successfully launch new products and applications; competition; our sales, marketing and distribution capabilities; our planned sales, marketing, and research and development activities; unanticipated increases in costs or expenses; and risks associated with international operations. Information on these and additional risks, uncertainties, and other information affecting our business and operating results can be found in our existing and future filings with the Securities and Exchange Commission. These forward-looking statements speak only as of the date hereof. We disclaim any obligation to update these forward-looking statements except as may be required by law.

**About eviti®**, the nation's foremost evidence-based treatment intelligence for decision support platform

eviti® is a SaaS-based, point-of-care clinical decision support platform that allows oncologists to quickly see and assess treatment regimens, outcomes, cost, and level of evidence in order to confidently select a clinically-appropriate treatment. eviti consists of three applications – eviti Advisor, eviti Advisor Enterprise, and eviti Connect® – that together support advanced cancer care by aligning the priorities of physicians, payors, and patients at the moment of clinical prescribing.

### **About NantHealth, Inc.**

NantHealth, Inc., a member of the NantWorks ecosystem of companies, is a next-generation, evidence-based, personalized healthcare company enabling improved patient outcomes and more effective treatment decisions for critical illnesses. NantHealth's unique systems-based approach to personalized healthcare applies novel diagnostics tailored to the specific molecular profiles of

patient tissues and integrates this molecular data in a clinical setting with large-scale, real-time biometric signal and phenotypic data to track patient outcomes and deliver precision medicine. For nearly a decade, NantHealth has developed an adaptive learning system, CLINICS, which includes its unique software, middleware and hardware systems infrastructure that collects, indexes, analyzes and interprets billions of molecular, clinical, operational and financial data points derived from novel and traditional sources, continuously improves decision-making and further optimizes our clinical pathways and decision algorithms over time.
